

# Joint Sealing, Road Marking and Pavement Repairs

## Local Service, Global Expertise

Eurovia, a leading global brand in infrastructure construction and maintenance, is one of the foremost providers of Joint Sealing, Road Marking and Pavement Repair services in the UK. We have a long history and proven track record of restoring, preserving, refreshing, and extending the life of highway,

airfield, industrial and commercial pavement surfaces.

We continually invest in the development and training of our people, together with the latest plant and equipment, supported by quality and safety driven certifications, to offer our Clients an unrivalled service.

**A world of expertise, applied locally.**

## Local Service, Global Expertise

Our joint sealing, repair and road marking techniques increase the service life of pavement surfaces, giving our Clients' access to cost effective, value added solutions for the safe and efficient operation of their networks and assets. Eurovia brings:

- A highly customer focused approach, underpinned by flexibility and responsiveness
- Early engagement and expert technical advice, enhanced through our in-house Pavement Consultancy, Jean Lefebvre
- Highly skilled teams, we invest in our people to deliver quality services – fully CSCS and NVQ qualified
- High quality products, externally accredited to the National Highway Sector Scheme 7 and BBA HAPAS
- Continual investment in the latest plant and equipment to enhance the safety, efficiency and quality that is delivered by our teams

### Among the solutions and techniques Eurovia offer are:

- High performance **crack and joint repair systems** using BBA HAPAS approved materials for both asphalt and concrete surfaces; including for highways, airfield and industrial pavements
- **Screeding** for treating multiple cracks and defective areas in both asphalt and concrete surfaces
- **Inlay repair systems** for treating reflective cracking in pavements
- Full depth **fast curing** and thin bond concrete repair systems
- **Induction cut and seal** to asphalt overlay on concrete carriageways
- **Ironwork repairs** in asphalt and concrete surfaces using the IronGuard system
- Bridge Asphaltic Plug Joints
- Deep pavement **saw cutting** in concrete and asphalt, up to 500mm in depth
- **Concrete bay** joint sealing, including fuel resistant materials
- Coloured **overbanding** and screeding to match decorative surfaces
- **Road Marking installation** – Thermoplastic, Pre-formed, Chlorinated Rubber, Methyl Methacrylate, Raised Rib & Decorative markings
- **Road Marking Removal** – Hydroblasting & Scabbling
- **Road Stud and Cats' Eye** Installation
- Approved installer of **SAFETRACK CT** Skid-resistant, coloured surfacing for in-highway cycle lane demarcation

### BBA HAPAS accredited Repair Systems

We are BBA HAPAS approved installers for a number of pavement repair systems, to include:

**Overbanding** – a cost-effective hot applied process to treat random cracks on a road surface. Eurovia are approved installers for BBA HAPAS approved materials which provide excellent skid resistant values, repair cracks and seal the road surface against the ingress of water therefore extending the life of the pavement.

**Inlaid Crack Sealing** – is recessed into the surface and filled with a BBA HAPAS approved polymer - modified, flexible bituminous compound which provides a long-lasting solution for repairing cracks and surface defects in bituminous road surfaces, as well as cracks and failed joints in concrete roads.

**IronGuard** – is a revolutionary, BBA HAPAS approved, bituminous based reinstatement system that solves the continuing problem of rocking ironworks and asphalt breaking up around ironworks.

**Maxi-Crete F** – is a BBA HAPAS pre-mixed hot applied, high modulus, polymerised resin compound and is used to repair surfaces to meet friction and texture depths. It offers extremely good adhesion to asphalt surfaces and has excellent flow properties thereby ensuring total penetration of the crack/ recess. Following cooling it sets to a tough, load-bearing repair that is capable of maintaining flexibility through a wide range of temperatures and will ensure optimum compressive resistance.

Eurovia deliver unrivalled high-quality services and solutions across the UK, on time and to budget.
